

# Planning Ideas

## Where private meets social.

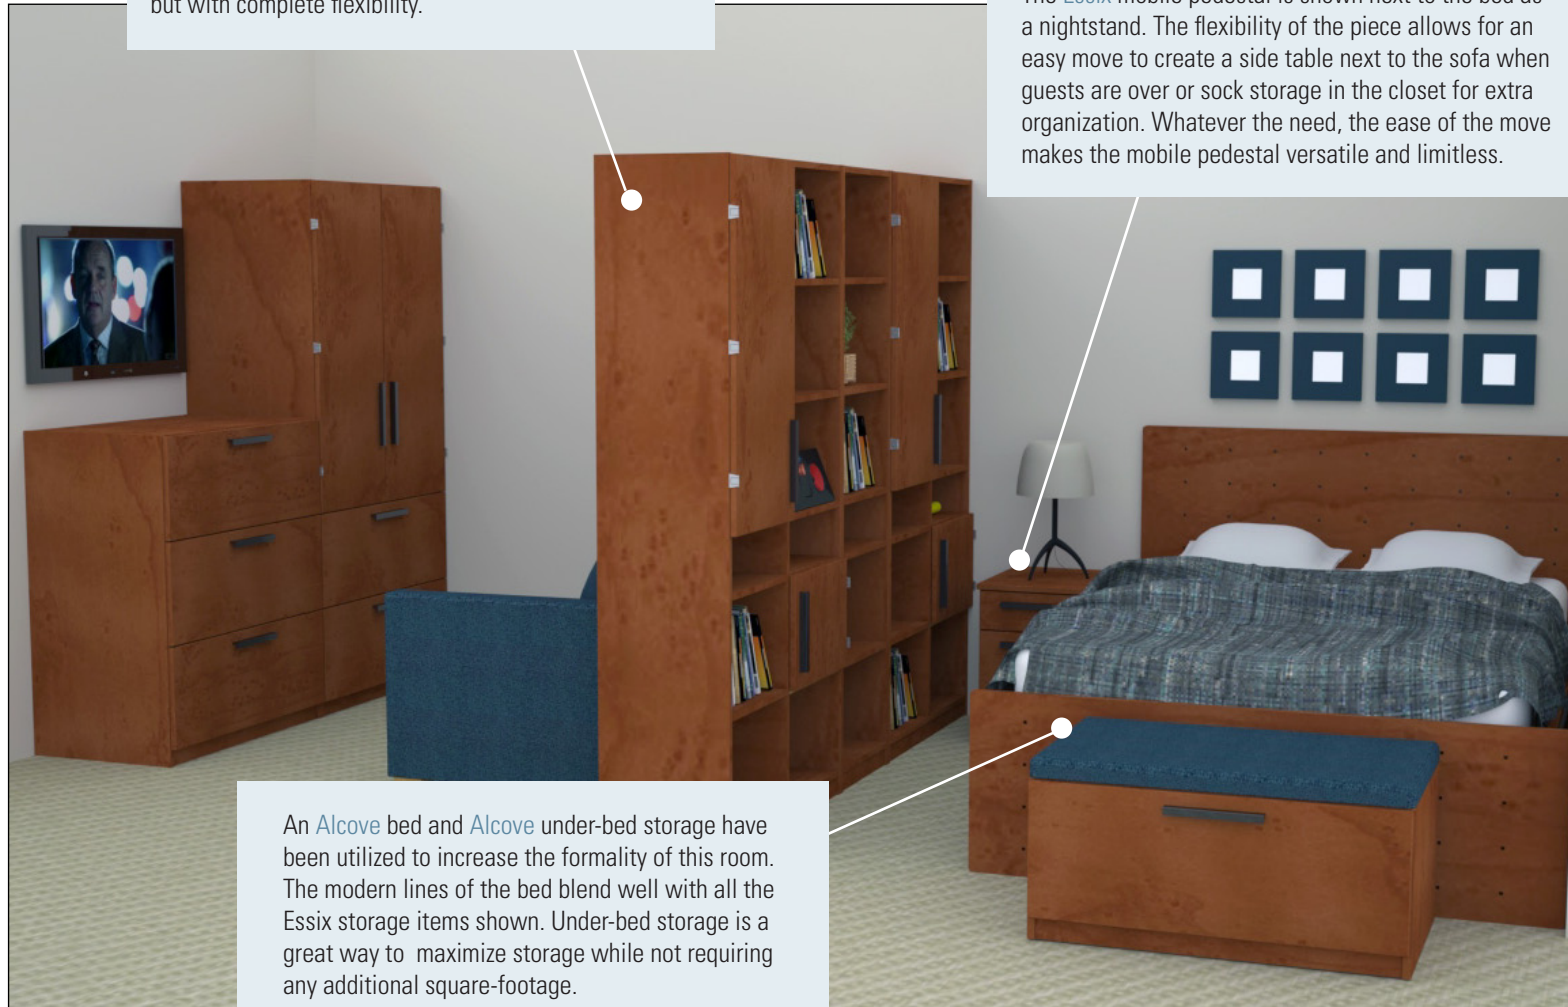

This space was created to solve the space constraints of a studio apartment. The common dilemma: where to store your things and how to keep your personal space separate from your social space. With a little creativity, **Essix** makes it easy to not only break the space up, but also give maximum storage opportunities.

### Products:

Essix and Alcove

The combination of **Essix** tower storage units creates a division in the room which separates sleeping space from social space. With a completely finished back, the **Essix** storage wall gives the feeling of a built-in wall but with complete flexibility.

The **Essix** mobile pedestal is shown next to the bed as a nightstand. The flexibility of the piece allows for an easy move to create a side table next to the sofa when guests are over or sock storage in the closet for extra organization. Whatever the need, the ease of the move makes the mobile pedestal versatile and limitless.

An **Alcove** bed and **Alcove** under-bed storage have been utilized to increase the formality of this room. The modern lines of the bed blend well with all the **Essix** storage items shown. Under-bed storage is a great way to maximize storage while not requiring any additional square-footage.
